01 Basics / init

create github repo

new repo

1. git init
2. git add README.md
3. git commit -m 'initial commit'
4. git remote add origin https://github.com/bergmul/project-name
5. git push -u origin master (-u makes this the standard remote branch)

existing repo

1. git remote add origin https://github.com/bergmul/project-name
2. git push -u origin master (-u makes this the standard remote branch)

See remotes

1. git remote
2. git remote –help
3. fix url
4. erase remote

What have we learned?

- Go to github and open a new project. Follow the instructions
- **git push:** put stuff into remote
- **git pull:** get stuff from remote
- **git fetch:** update .git from remote, but don't apply it to files in folder
